

## Quick Start Guide:

### Available features and how to use them

1. Home page navigation contains the various pages/ functions that are a part of this GUI
2. After running the application successfully following instructions from readme.txt, go to <http://127.0.0.1:8000/polls> to go to the homepage of the application.
3. This is the homepage of the application and the Navigation header bar contains the various features offered by the GUI
4. Home is an available link in every page of the GUI and returns the user to this homepage of the application.
5. All Contacts contains the list of all available contacts in the contacts database.
6. Search contains the feature to search by any multiple text fields in one single go. (like google, bing, etc)
7. Create a new contact adds the facility to create a new contact and saves that contact on submission to the database.
8. Each row in the All Contacts page contains the contact\_id which is a link to edit that specific contact\_id.
9. Upon changes and submit, the changes made to this contact is saved onto the database and the page is redirected to the All Contacts page.
10. Each row in the All Contacts page contains a Delete button that deleted the specific row after confirmation from the user.
11. Search facility has the ability to search through all available attributes in the database and return appropriate results.
  - a. Eg. Search\_text: jar -> returns all rows that “**contains** jar in **any** one of its attributes.
  - b. Eg. Search\_text: jar bari -> returns all rows that “**contains** jar in **any** one of its attributes” **AND** “**contains** bari in **any** one of its attributes”.
  - c. Please note that the result is an intersection of the various individual texts in the search\_text
